Learning Programs

Leadership

Leadership

Creating inspired and motivated leaders is the primary focus throughout the leadership learning branch. Students are actively involved in learning activities that allow innovative thinking and creativity.

Students are also challenged to work and learn in teams to solve problems and overcome obstacles while focusing on achieving a common goal. Students are particularly challenged to take an innovative and initiative based approach to their contribution to the team, striving to unearth characteristics of leadership within themselves.

Students will:

- Be given the opportunity to demonstrate positive and inspiring behaviours in a safe learning community environment.
- Develop skills in communication and cooperation and will be able to make constructive contributions to team success.
- Be given the opportunity to explore and become more familiar with aspects of human interactions, emotions and feelings; including empathy, self-efficacy and conflict resolution.
- Be encouraged to understand and discover leadership qualities within themselves and apply these characteristics to a team environment.
- Work collaboratively, negotiate roles, and delegate tasks to complete challenges within a team environment.

Learning activities used to explore the themes within this learning branch can be adapted to suit students across a range of learning stages.

Programs developed around the Leadership learning branch are suitable for students in AusVELS levels 5-8: Building Breadth & Depth and 9-10: Developing Pathways.
